ASSEMBLY

Review all steps and understand assembly before beginning.

Do not fully tighten hardware until all components have been loosely assembled.

TIP: Always fully insert the hex key inside the designated notch of the bolt.

If the hex key is not fully inside the notch, the hex key could slip out, causing damage to the bolt head. Repeated hex key slipping will cause the notch to become rounded, making it difficult or impossible to tighten the bolt with the hex key.

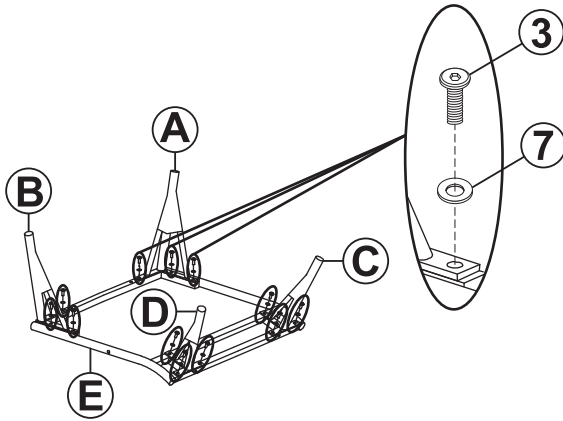

ATTENTION! Do not fully tighten any hardware until all components are loosely assembled. If each bolt is fully tightened too soon, mounting holes may not align and parts may not easily fit together.

Turn each bolt, by hand, until the bolt grips into the mounting hole. Continue this process until all bolts have been loosely installed. Only tighten the hardware entirely after the product is completely set up; do not over-tighten bolts. Do not use any electronic tools to assemble this product. The high energy of electronic tools can cause hardware to over-tighten, and can strip the bolt, the bolt head, and the mounting holes.
